HELPFUL LINK: <https://technologystudent.com/joints/iron1.html>

Steel is a popular construction material. It is found in many of our buildings, bridges, aircraft, cars, ships and many everyday items. Without steel, our modern industrial world would not exist.

In order to produce steel, iron ore is required, in large quantities.

Complete the table below, by adding notes and diagrams, representing the stages of mining iron ore and refining it into pellets, ready for the steel mill.
