ENERGY PRODUCTION

V.Ryan © 2009 World Association of Technology Teachers

Energy and fuels such as electricity and petrol are produced in many ways. Energy is sometimes produced in such a way that the environment around us is damaged. However, there are ways of producing energy that reduce the risk of damage to a minimum.

Some of the ways of producing energy are written below.

1. Select each of the words and print them under the symbol that represents them.
2. Place a large cross next to the method of energy production that you feel damages the environment the most. Why do you think this is the case?
3. Place a large tick next to the method of energy production that you feel reduces damage to the environment the most. Why do you think this is the case?

SOLAR POWER

WAVE POWER

GEOHERMAL
ENERGY

OIL PRODUCTION

COAL MINING

WIND POWER

NUCLEAR POWER

HYDRO
ELECTRICITY
