

SOLAR PHOTOVOLTAIC PANELS

MORE INFORMATION

Photovoltaic panels convert the sunlight directly into electricity. A typical example of a device powered by photovoltaic cells is a solar powered calculator or a house with roof solar panel, producing electricity for the home. This type of device only needs a small amount of electrical power to work and can even be used in a room with artificial light (bulbs / fluorescent light).

COMPOSITION OF A PHOTOVOLTAIC PANEL

Photovoltaic cells are composed of a number of layers (see below)
