DESIGN PROBLEM

1. Below is a sample Design Problem. A space has been created below each sentence. Write your own version of each sentence in this space. By the time you have written your version of each sentence, you will have composed your own design problem.

My younger brother is recovering from an operation in hospital and he is feeling better day after day.

My parents and sisters have sent him get well cards and this has cheered him up, as he likes to read them and show them to the nurses and doctors.

He especially likes the cards from relations that contain money.

At the moment I do not have a Saturday job and as a result, I do not have the money to buy a card.

My brother has already asked me why I have not sent him a get well card.

My excuse up to now is that I have been looking for a special card and will only send him the best.

2. In the space below, list what you consider to be the key words/phrases of your Design Problem.

DESIGN BRIEF

1. Below is a sample Design Brief. A space has been created below each sentence. Write your own version of each sentence in this space. By the time you have written your version of each sentence, you will have composed your own design brief.

I am going to design and make a mechanical or pop-up 'get well' card for my younger brother.

The card will be amusing to young and older people and state 'get well' very clearly.

The card will be easy to read and be distinctive, as well as cheap to produce.

It may be based on existing characters or new ones designed by myself.

The card will involve simple movement and this will improve the impact of the message on the card.

It will be made from quality materials.

The colour scheme will be chosen carefully so that card appears bright and cheerful.

Most of all, it will cheer up my brother and aid his recovery.

2. In the space below, list what you consider to be the key words/phrases of your Design Problem.
